The Portrait

- The portrait: to project virtues and power for future generations
- The self-portrait: an oddity, vanity
Teenager Reportedly Tried to Kill Himself Because He Wasn’t Satisfied With the Quality of His Selfies
Public identity: the art of standardizing poses

• Government-issued identity: a “surveillance” photo, that must be easy to identify, i.e. facial expressions must conform in order to facilitate the job of face-recognition machines

• The goal: universal and standardized measurement and decoding by software algorithms
Social photo: the art of posing

• Smiling for the camera is a learned convention
Agit-prop selfies

- “Photography is power” (Susan Sontag, “On Photography”, 1973)
- Making a statement by altering one’s public image

Lynda Benglis, 1974
The Selfie: Constructing the Self

- Most platforms (social networking sites, chat sites, dating sites, etc.) ask you to create a “profile” which includes a photo of you.
- Social etiquette in cyberspace requires a visual presentation of identity.
- The selfie helps construct your persona even before they hear what you have to say or meet you in person.
- The individual plays an active role in the way that images represent her life.
The Quantified Self movement: using self-tracking to improve one’s life

FT Magazine

Invasion of the body hackers
By April Dembosky

You are just a number

Can you become healthier and happier by logging every snore, step and mood swing? We record a Californian obsession catching on here

Vanity Fair (2013)
MIT Tech Review (2011)
Sunday Times (2013)
The “Californian Ideology”: capitalism, collectivism, and technological determinism
“The audience for our self-representations is no longer, as a few decades ago, ourselves and each other. Our audience today includes machines.

The machines … send the results on to marketers, employers, insurers or governments.

We don’t think too much about our machine audiences. We are too busy learning more about ourselves and each other by taking selfies…”
• Concerns about surveillance predate the Web by many decades…
• “Insidious invasions of privacy”: in business, in the home, by law enforcement, by the underworld, by anyone who’s out to get you”
“People willingly participate in the monitoring of their own behavior” because of perceived benefits

The “voluntary panopticon”

After all, you have to tell your doctor everything about your health if you want an accurate diagnosis of your symptoms, and you have to tell your tax accountant everything about your finances if you want a favorable tax return
• “The right to privacy has succumbed to the seductions of a narcissistic culture and casino capitalism's unending necessity to turn every relationship into an act of commerce”

• “The surveillance and security state is one that not only listens, watches and gathers massive amounts of information ... but also acculturates the public into accepting the intrusion of surveillance technologies”.

• “…a social order in which surveillance becomes self-generated... through a machinery of consumption... Such bits then move from the sphere of entertainment to the deadly serious and integrated spheres of capital accumulation and policing”.
America's Surveillance Net
There is a revolution afoot—one that is being carried out by the government against the fundamental law of the land.

- “Today, alongside each one of us, there exists a second, electronic self, created in part by us, in part by others. This other self has become de facto public property, owned chiefly by immense data-crunching corporations, which use it for commercial purposes. Now government is reaching its hand into those corporations for its own purposes, creating a brand-new domain of the state-corporate complex.”

- Popular meme “You don't browse the Internet. The Internet browse you.”
It is not surveillance but “coveillance” (participatory surveillance)
Coveillance is an old idea

- Michel Foucault: “Visibility is a trap” ("Discipline and Punish", 1977)
- Gilles Deleuze: an individual is constructed as a “dividual”, an endlessly divisible representation of a person as data, which becomes a tool to control the individual ("Postscript on the Societies of Control" 1992)
- Popular meme “You don't browse the Internet. The Internet browses you.”
“Users of social media platforms constantly have each other under coveillance
This process of networked coveillance is intrinsic to the way social media function”
“Facebook's general function is that of offering a general heterotopic medium
Whereas Facebook is attractive to many primarily as a social networking tool, it is repulsive to some as a site, a heterotopia.”
A heterotopia: a space that disrupts the continuity and normality of common everyday places.

Unlike utopias, which are unattainable and inherently unreal, heterotopias are real spaces.

Heterotopias are “counter–sites, a kind of effectively enacted utopia in which the real sites, all the other real sites that can be found within the culture, are simultaneously represented, contested, and inverted.”

Movie theaters, cemeteries, ships, brothels, Disneyland

Every culture in the world creates heterotopias
“Cyberspace should not be thought of as a single space. Whilst the network is a kind of malleable, expandable, linked unity, the actual social spaces that result from its amorphous being are many in number and vary in both quantity and quality... from sex-based chat-rooms to commodified digital libraries and embrace almost every spatial possibility in between. Thus, not only can cyberspace as a whole be considered a heterotopia, but within cyberspace itself there must exist heterotopias”.
The real nature of social networking

• Facebook is not a social networking tool but an archive of the user’s life.
• It belongs to the category of museums, not to the category of salons.
• Facebook’s key feature is the “timeline” (2012) that rewinds your entire life in a multimedia format that no existing museum can match, and potentially with an infinite amount of personal details because of the links to other people’s timelines.
• Facebook’s timeline automatically generates a record of your life, an extended multimedia multidimensional browseable editable self.
The real nature of social networking

• It is doubly a self: because you created it, bit by bit, and because you can reedit it at any time, thus changing your own historical self.
• If you broke up with that boyfriend, you can remove all the pictures of him, or even any trace of all the trips that you took with him and of all the parties that you two attended together.
• Facebook allows you to retroactively construct your own persona
• Facebook’s Timeline can be used as a time machine that allows you to change your own past and, by creating a new persona, to alter your future.
“As an archive of a user’s activities that is, in its ideal form, automatically updated, Timeline (and associated Facebook services) is symptomatic of a technological understanding of the world common to many companies in Silicon Valley.

Facebook’s archival subjectivity indicates a societal change in the pre–understanding of things in general.

Facebook ... helps its users present cleaner, better curated versions of themselves,”
Beating the system?

• The “selfie” is a very malleable object
• One can take a selfie in a million different ways (unlike government id photos that must comply with strict rules)
• A selfie usually violates the principles of government-issued ids: weird facial expressions, weird camera angles, weird positions, weird hand gestures, make you “unmeasurable“
• Filters can alter a selfie at will, even changing the time and location
An instrument of rebellion?

- Selfies mark the democratization of face image producing, distribution and cataloging
- The selfie as the weapon of choice for a movement against surveillance and standardized metrics?

The Future of Selfies

The future: facial recognition algorithms will create your persona, a more objective persona than you create by censoring which bits of your life’s history are public.
The Surveillance State

• 2013: Edward Snowden leaks to the media the clandestine mass electronic surveillance PRISM program operated by the NSA
“One of the less publicized facts about the deployment of surveillance and military drones is that in addition to weapons, cameras, and other sensors, they are equipped with a device called an ‘‘Air Handler’’ that can capture all available wireless data traffic in the area.

The drone then comes to represent a double-image of surveillance: both the familiar ‘‘legacy’’ version of targeted, purposeful spying and the emerging model of ubiquitous, opportunistic data capture.”
The omniscient state "in George Orwell's 1984 ... is represented by a two-way television set installed in each home. In our own modern adaptation, it is symbolized by the location-tracking cell phones we willingly carry in our pockets and the microchip-embedded clothes we wear on our bodies."
WHAT YOU DON’T KNOW ABOUT SURVEILLANCE

- “Surveillance creates an asymmetrical power relationship”

Source: Pew Research Center’s Internet & American Life Project tracking surveys 2005-2013. Spring Tracking Survey, April 17 – May 19, 2013. N=1,895 adult internet users ages 18+. Interviews were conducted in English and Spanish and on landline and cell phones. The margin of error for results based on all internet users is +/- 2.5 percentage points.
• Increasing importance of educating young people in media literacy

• “In a networked world, in which fewer intermediaries control the flow of information and more information is flowing, the ability to critically question information or media narratives is increasingly important”
